

### Carbon dioxide CO<sub>2</sub>

In terms of quantity, CO<sub>2</sub> is the most important combustion product. CO<sub>2</sub> has no direct effect on human health, but is the most "dangerous" emission when it comes to the greenhouse effect. The environmental impact of CO<sub>2</sub> emissions can be described as global. Therefore our main goal is to reduce the emission of CO<sub>2</sub>.

Year	2003	2004	2005
Emission CO <sub>2</sub> kg/100km average	74,83	72,80	70,72

CO<sub>2</sub> kg/100 km

CO<sub>2</sub> kg/100 km
